

Some clients equate our specialized construction skills to those of a brain surgeon.

Some clients equate our specialized construction skills to those of a brain surgeon.

When Washington Hospital elected to install the first Leksell Gamma Knife® Perfexion™ in the U.S., it called in XL Construction. XL was chosen to build the complicated facility required to safely direct and contain the 192 precise radiation beams focused to treat serious neurological conditions, noninvasively, as well as, to construct the entire, new, state-of-the-art imaging center — all while the existing medical building needed to continue providing uninterrupted care. Today, the new imaging center offers patients a warm, inviting treatment facility with the gold standard in imaging and radiology technologies.

OVERVIEW:

Complete build out of Washington Hospital Outpatient Imaging Center, installation of MRI, Gamma Knife, CT scan, X-ray and mammography units

UNIQUE CHALLENGES:

- XL installed first Leksell Gamma Knife® Perfexion™ treatment system in the U.S.
- Required constructing a 15" thick concrete vault to isolate the procedure from vibration and radiation
- Construction performed in an operating medical office building without disruption to the facility's operation
